

USAMRIID

REDUCTION OF ZIKA VIRUS THREAT

MEDICAL RATIONS FOR MOSQUITO FLAVIVIRUS

The US Government has been releasing warnings about viral blooms since the outbreak of HIV. Recently H1N1, Herpes, and COVID-19 have been broadcasted by American networks in preparation for global virus pandemics. In 2024, the Zika virus is a priority virus pandemic. Zika virus is spreading through mosquito contact.

ANTIVIRAL AND PrEP FOR MOSQUITOES

Vendula is a twice daily 1600mg mosquito antiviral and PrEP medication from VirusTC. Vendula is a new FDA-approved organic, non-GMO, plant-based ingestible mosquito repellent by VirusTC. Vendula is taken by oral ingestion for complete protection from mosquitoes. Vendula protects the whole body, not just application areas of skin. Vendula is safe for small children. Vendula is safe to use with the entire family. Vendula acts as a sedative to mosquitoes. Vendula puts mosquitoes to sleep. Vendula causes bloating and extreme discomfort in mosquitoes. Mosquitoes stay away from Vendula.

Operation [Cancer](#) Moonshot has recognized VirusTC's Vendula as the most effective mosquito replant for ingestion. Ingestion medications keep the medications in the body as opposed to on the skin which could rub off at night.

ACTIVE INGREDIENTS

Vendula contains geranyl acetate. Vendula acts as an integrase strand inhibitor. Vendula contains linalool. Vendula cooks-off plasmodium parasites. Linalool is effective at fighting staphylococcus epidermides, rhodococcus equi, and flaviviridae. Linalool reduces the growth of candida albicans, s. aureus, lactobacillus casei, porphyromonas gingivalis, and streptococcus mutans. Linalool provides relief from sore throats, ulcers of mouth and gums.

BRAIN DAMAGE FROM FLAVIVIRUS

The Zika virus is a flesh-eating parasite that attacks brain tissues. Zika virus infection causes Guillain-Barré syndrome. On November 2016, WHO declared a Public Health Emergency for Zika virus. Outbreaks of Zika virus disease were identified throughout most of the Americas and in other regions with established *Aedes aegypti* mosquitos. WHO has confirmed that Zika spreads through skin-to-skin contact. Zika is spread as an STD. Over 90 nations and territories have reported mosquito transmitted Zika virus infections. Virus Treatment Centers has partnered with the Pacific Northwest National Laboratories and University of Washington to track the spread of Zika Virus for US President Joe Biden's Operation Cancer Moonshot.

SAFETY AND SIDE EFFECTS

When taken orally in appropriate amounts, Vendula appears to be safe. High doses of Vendula can cause:

- Blurred vision
- Difficulty breathing
- Burning pain in the throat
- Burns to the eye (if you get it in your eye)
- Confusion
- Decreased level of consciousness
- Diarrhea (watery, bloody)
- Stomach pain
- Vomiting
- Rash
